- Town Line

\* Evacuation Route: Best available information from Local Comprehensive Emergency Management Plans on file with the Massachusetts Emergency Management Agency.

\*\* SLOSH Zones (Sea, Lake, and Overland Surges from Hurricanes) depicted here are areas of inundation modeled to occur from wind and pressure forces of hurricanes. Inundation areas reflect "Worst Case" combinations of hurricane direction, forward speed, landfall point, and high astronomical tide. The SLOSH zones shown here have been georeferenced for this project and are originally found in the publication "Southern Massachusetts Hurricane Evacuation Study Inundation Map Atlas, December 1994" by the US Army Corp of Engineers. "Worst Case" hurricane surge elevations are given in the surge tide profiles provided on Plate iii of that publication.

Additional Data Sources include MassGIS Executive Office of Environmental Affairs and the Cape Cod Commission's Geographic Information System Department.

This map was produced by the Cape Cod Commission's Geographic Information System Department for the Pre-Disaster Mitigation Project. Funding for the Cape Cod Pre-Disaster Mitigation Planning grant was provided to the Cape Cod Commission by the Massachusetts Emergency Management Agency. Funding for statewide PDM planning was originally provided by the Federal Emergency Management Agency - Region I under the DMA 2000 initiative. Comments and corrections are welcome at the Cape Cod Commission office or by email [gis@capecodcommission.org](mailto:gis@capecodcommission.org). This map is illustrative and all depicted boundaries are approximate.
